

Smart Corrosion Inhibitors

THE TECHNOLOGY

Intelli-ion® is a patented technology that is added to primer coatings to provide protection against corrosion.

High performance

Comparable or better performance than market-leading alternatives.*

*depending on reformulation objectives.

Smart technology

Anticorrosion technology protects in a unique way via electro-chemical protection.

Sustainable benefits

Remove environmental warning labels from packaging and reduce CO₂ emissions per litre of paint.

Cost advantages

Save up to 30% per litre of paint, as well as lower transport & storage costs, and no commodity metal market exposure

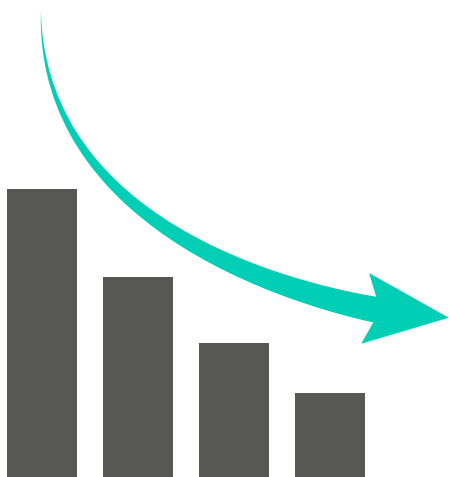

HOW IS IT SUSTAINABLE?

Intelli-ion® technology has been designed to completely replace heavy metal and chromate inhibitors or co-blend with phosphate inhibitors.

3.2% GLOBAL CO₂

It is estimated that 3.2% of the world's CO₂ emissions is attributed to repairing/replacing steel damaged by corrosion. Switching to sustainable, high-performance inhibitors lowers the burden on the environment.

Intelli-ion® allows customers to lower the amount of inhibitor used and reduce the amount of CO₂ produced per litre of paint.

Intelli-ion® is made up of 50% recycled waste stream product from another industry, providing it with a second life while maintaining its high quality.
